DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 06/25/08 have been fully considered but they are not persuasive.

In response to the Applicant's remarks, on page 14, the Applicant was not point out the argument on the remarks in correspond the Rejection Office Action that mailed on 04/25/2008. Therefore, the independent claims 58-60 are maintained in rejection. The Examiner will reconsider the independent claims 58-60 if the Applicant will cancel the claim or amend the claimed limitations as set forth in claim 31. See Office Action for detailed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 58-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sharma in view of Chow (US Pub No: 2002/0002678).

As to claim 58, Sharma discloses a mobile wireless terminal, the terminal comprising means for generating and storing a first numerical chain comprising a series of n values using a one-way coding function such that a given value within the chain is easily obtainable from a subsequent value (page 5 par. [0062-0063], [0075] “MD-5 hash transforms it into a unique 128 bit value”); and means for disclosing values from the numerical chain to an access node in order to allow the access node to authenticate the mobile wireless terminal (page 5, par [0072-0075]).

However, Sharma does not disclose the subsequent value is not easily obtainable from that given value, a series of n values using a one-way coding function.

In the same field of invention, Chow discloses the subsequent value is not easily obtainable from that given value (page 9, par [0149-0156], a series of n values using a one-way coding function (page 9, par. [0165-0166])). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the subsequent value is not easily obtainable from that given value, a series of n values using a one-way coding function as taught by Chow to

the system of Sharma in order store seed value than use to calculate the reference value, and storing the quantity of the fewer iterations.

As to claim 59, claim is rejected for the same reason as set forth in claim 58.

As to claim 60, claim is rejected for the same reason as set forth in claim 58.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
